

# AFC3000 Refastening function **NEW**

## ◆ Process consolidation

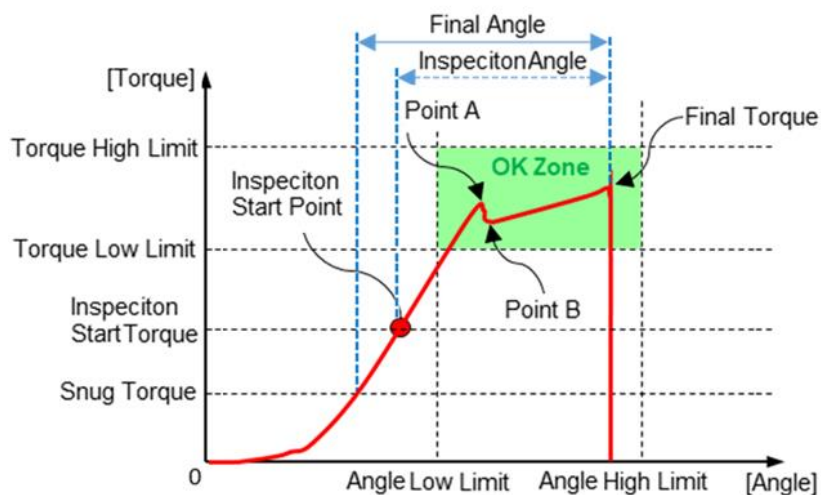

The torque wrench process can be automated.

## ◆ Similar refastening

The similar refastening is achieved no matter who works.

- Tighten at the set angle and speed. Inspection is possible.
- Breakaway calculation, upper and lower limits of torque and angle are monitored.

\* Torque calibration is recommended at least once a year.

\* This function can be used with the controller and PC software version 2.0.

\* Specification and outline might be changed without notice due to system improvement.
